

C) We need to iterate.

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option:

1.	Which of the following methods do we use toA) Least Square ErrorC) Logarithmic Loss	find the best fit line for data in Linear Regression? B) Maximum Likelihood D) Both A and B
2.	Which of the following statement is true about A) Linear regression is sensitive to outliers C) Can't say	t outliers in linear regression? B) linear regression is not sensitive to outliers D) none of these
3	A line falls from left to right if a slope isA) PositiveC) Zero	? B) Negative D) Undefined
4.	Which of the following will have symmetric r variable?A) RegressionC) Both of them	elation between dependent variable and independent B) Correlation D) None of these
5	Which of the following is the reason for over fA) High bias and high varianceC) Low bias and high variance	itting condition? B) Low bias and low variance D) none of these
6	 If output involves label then that model is ca A) Descriptive model C) Reinforcement learning 	alled as: B) Predictive modal D) All of the above
7.	Lasso and Ridge regression techniques belA) Cross validationC) SMOTE	ong to? B) Removing outliers D) Regularization
8	To overcome with imbalance dataset whichA) Cross validationC) Kernel	technique can be used? B) Regularization D) SMOTE
9.	 The AUC Receiver Operator Characteristic classification problems. It usesto ma A) B) TPR and FPR C) Sensitivity and Specificity 	(AUCROC) curve is an evaluation metric for binary ake graph? B) Sensitivity and precision D) Recall and precision
10	D. In AUC Receiver Operator Characteristic (A curve should be less.A) True	UCROC) curve for the better model area under the B) False
1	 Pick the feature extraction from below: A) Construction bag of words from a email B) Apply PCA to project high dimensional da C) Removing stop words D) Forward selection 	ata
In Q1	2, more than one options are correct, choo	se all the correct options:
1:	2. Which of the following is true about Normal Regression?A) We don't have to choose the learning rateB) It becomes slow when number of features	

MACHINE LEARNING

D) It does not make use of dependent variable.

MACHINE LEARNING

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

Ans: it is method to estimate complexity of ML model sothat outfit or under fit problem can be avoided and we can generalize model by adding penalties on model parameters.

14. Which particular algorithms are used for regularization?

Ans. Lasso Regression

15. Explain the term error present in linear regression equation?

Ans. Error is explained by Mean Absolute error, Mean square error, Mean absolute percentage error, Root mean square error, Mean absolute percentage error, MPE.

MAE= distance of observed y values from predicted y values at each of x.

= 1/n ∑ abs(y-y predicted)

MSE= distance of observed y values from predicted y values at each of x.

= $1/n \sum (y-y \text{ predicted})^2$

RMSE= root Mean squared error

MAPE= Percentage equivalent of MAE

= $100\%/n\sum (y-y \text{ predicted})/y$
